He did no want me going in their bedroom so I don't know. But he also said that maybe because 4 people were using their phones at the same time.

Les,

Can you please ask him tomorrow if he still wants us to do something about the wifi. He sounded like he's ok with it after I told him the signal is reading great just outside their bedroom.

Thanks

What's the speed in the bedroom?

The kitchen sits between the TV (where the WiFi router/modem is) and the bedroom, so the pipes and appliances are likely dampening the signal.

How much it dampens it would be good to know to balance against the solutions below.

- A. We can't really move the modem out from behind the kitchen without running cables over the middle of the floor.
- B. These devices are supposed to be able to extend any WiFi network, but I've never tried them for that purpose, but they're the easiest extension available.

https://www.bhphotovideo.com/c/product/1300012-REG/amplifi_afi_p_hd_hd_mesh_point.html

(\$110)

C. Otherwise, if we still have them, we'd (meaning me) have to take a pair of the AirPort Extremes from the basement at 71st, disable the WiFi on the cable modem and create an Apple network with the second basestation as a wireless relay to amplify the WiFi into the bedroom. (Apple discontinued the AirPort Extreme, so we can't buy more.)

D. If we don't have them, we'd have to buy this in ADDITION to the device (in B.) above:

https://www.bhphotovideo.com/c/product/1300011-REG/amplifi_afi_r_hd_home_wi_fi.html

(\$140)

Karyna,

We were able to put both standing lamps in the living room in one dimmer switch. The lamps in the bedroom Yoni wants it left as is.

Cable box has been installed and working.

Wifi works perfectly in the living room but dies down in the bedroom.

James,

Is there something we can do to boost up the signal in the bedroom?

Signal is 220/12 mbps
