Hi everyone,

I called him back again to inform him that we need a date and he said that after they finish pull the panels off. And he can't give an accurate date till all the panels get pulled out and the process kind of slow because of other skies that are being work on that was there before.

Greetings Tap,

So EBL Watercraft has not run any diagnostics as of yet; they are still raking the Quadski apart? What day does Bart anticipate he will have the panels off and begin to run his tests? We want to be accurate when we update JE.

Kind regards, DW

Good afternoon,

I just spoke with barrt and he said that they are still pulling off the panels and he will send more updates when they done pulling off those panels

Thank you,
Tap.
