Subject: patient question

Dear Dr. Marmor,

I am sorry to bother you out of the appointment time. I would greatly appreciate your advice when you have a moment please...

My skin seems to get worse every day. It is red overall with multiple red raised spots. The texture is very rough and bumpy on both cheeks, temples and now the forehead. It has also been itchy last night and this morning. The new thing, that I have noticed since yesterday was itchy scalp and dandruff, which reminded me of the seborrheic dermatitis issue that you have brought up at our last appointment.

My current skincare regimen is the following:

AM: -racea

Previse 1-2 -leanser

Soolantra -ream

HA5 -oisturizer

Elta MD UV -aily broad-spectrum SPF 40

PM: Previse 1-2 cleanser

-nbsp; Ketoconazole 2% cream

-nbsp; HA5 moisturizer

Please advice how do you think I should proceed... Thank you very much!

Karyna Shuliak
