Subject: flooring

[REDACTED]

Either way this product i= installed there will be a wall with a pattern that is not square because t=e rooms walls are not square to begin with. Our mechanic installed this pro=uct square to a designated wall as per the building manager. If w= had it square to the wall in the picture than the other wall will be off s=uare. Your client needs to understand that there will be a wall with an un-=quare pattern due to the cooked walls, not the flooring. As for t=e balance, the job was installed satisfactory and I will need to have that p=id before anything moves forward.

Thank you
