Any =houghts on this? Should we have someone from your company come have a =ook to suggest a solution/material? Once we figure out what the best =aterial to use for the size of the panels, I'd like to get a photo =rinted 8'x8' as a test print to hold up in the space for my boss to see =o get a sense if that's what he wants before proceeding with the final =rints. I'm around all day tomorrow and should be in the city all of =ext week as well. Let me know the best way to proceed with this. =hanks

Hi guys. I had a closer look at the panels =oday and it looks like the current images are a type of wall paper =hemselves. There are a few seams which don't line up as you can see in =he photo. I don't think we want to compromise these, but rather try and =ount something over them in case he wants to go back to them one day. =m not sure how we could mount something without damaging them? Would =t make sense to have someone come have a look at these in person to get = better sense for options and mounting possibilities?
