I think the best bet would b= for me to come check out the space. I can meet with you late Monday aftern=on.  
Let me know if you are available. Thanks.

Any thoughts on this? Should we have someone from your company come have a look to suggest a solution/material? Once we figure out what the best material to use for the size of the panels, I'd like to get a photo printed 8"x8" as a test print to hold up in the space for my boss to see to get a sense if that's what he wants before proceeding with the final prints. I'm around all day tomorrow and should be in the city all of next week as well. Let me know the best way to proceed with this. thanks

Hi guys. I had a closer look at the panels today and it looks like the current images are a type of wall paper themselves. There are a few seams which don't line up as you can see in the photo. I don't think we want to compromise these, but rather try and mount something over them in case he wants to go back to them one day. I'm not sure how we could mount something without damaging them? Would it make sense to have someone come have a look at these in person to get a better sense for options and mounting possibilities?
