That floor is about the same hardness as oak on the Janka Scale of Hardness. All wood flooring will dent and scratch to some extent, it all depends on how you treat it.

You shouldn't be concerned.

just a question about the strength of this wood floor compared to others.. do you know if it will scratch and dent easily?

just asking because the worker who came to remove the covering for my AC made a comment that it will scratch quite easily

> Hi Anthony. I'm going to have my building replace this cover unit under my windows for the AC unit and radiator after the floors are installed. The current cover will need to be removed before the floors are installed. Is this something the installers can remove when they pull up the carpet, etc, or should I have the building remove it tomorrow?
