Jeffrey

You make a good point in regards to future repairs, Your B727 has always presented one off repair issues= since we are converting analog to digital info for the EFIS flight display=, currently installed. The past 15 years hasn't posed many repair issues, w= would typically would have to send our converter box for repair, since off=the shelf boxes dont exist. We ca=ry a spare MFD EFIS tube on board the plane now, box replacement is easy,&n=sp; I would imagine we would get good s=pport from Rockwell Collins, but off the shelf replacement boxes would dela= repairs, since special software was written for a 3 engine aircraft applic=tion.

However display tubes may be gene=ic, however I'm not sure where the software installation comes into play.&n=sp;

I'll ask Neil at Banyan his opinion on this issue.
