Jeffrey

attached response, regarding site visit by Geologist

How do you wish to proceed=

Mr. Gordon,

I was in Matt's office when you called and I suggested that he forward any email's regarding your conversation.

Dr. Cather, myself, and Dr. Lisenbee=at the South Dakota School of Mines have all done quite a lot of mapping in this area. I think Lisenbee actually did the work in and around Concho Pass.

I'm sure any one or all three of us=would be happy to do a walk/drive/ride through of your client's property if we were in the area, but we just don't have the time to go there.=

I would suggest=one of two options.

<=span>

1) Provide us with the GIS coordinates of the=property or simply go to Google Earth and capture a screen view of the property and its surroundings and send that to a scientist who is agreeable to discussing the property with you.

I would be happy to do this kind of thing. I could study the imagery=and the geology on my computer and then I could arrange a time to cal=/email your client and walk him/her through their property virtually.=C2◆ This would be almost as good as an in-person walk through and it wou=d be "free".

2) Contract with =n expert and pay them for a private tour. I would be able t= do this, but it would not be cheap. For private consulting I get \$1=00/day including travel.

<=p>

At any rate, I would do option 1 and then if your cl=ent really wants a private tour we could discuss it.

Sincerely,</=>

Charles Ferguson, =h.D, WY PG 2865
