Dear =ichard,

Today =as fairly good day. All things, I prepared for different treatment, =ere reversed. I bleached several areas effected by mold. After 2-3 =ours, I applied the toilet paper with 50% water and 50% alcohol. This =reatment was actually necessary to pull all the chemicals from the =leached areas. When the paper dries out, it pulls all the residue out =nd leaves it on the surface of the paper.

Tomorrow, = will check acidity and alkali on the surface an if this will turn =nbsp;out balanced, I will start applying colored wax. Tomorrow, I hope =o finish all surfaces ready for colored wax application. I have some =ictures on my phone. I am not very keen on how to send it to you, but I =ill try it. If you will not receive them tonight, I will ask [REDACTED] to =elp me send them tomorrow.

Brandon
