Subject: Re:

How can we set physics on the right track? There are several =amps that seem to have stopped talking to each other (with Steven =rominently in one of them, seen as an outsider, even though his =pproach is very promising). Is it possible to get science work across =aradigms, or do we need to wait for a paradigm to die off?

The situation is perhaps = bit similar to Noam in linguistics (with the difference that Noam =retty much started the field, so he will always be recognized, even if =any linguists do not buy into what he does now)?

With respect to language:

Steven proposes to do =everything by exhaustive search of the problem space: automatically find =he smallest set of programs that can produce the observables. Noam =eems to believe that there are somewhat complex, irreducible circuits =hat we have to figure out to understand language?

The obvious question: can we solve language by exhaustive =earch over simple type3 grammars? Is this how the brain does =t?

Bests to =everybody!

Joscha
