Good =rticle ... but to be clear he states I didn't test =evices known as repeaters, which extend the range of an existing =etwork, because I wanted to see how far I could push the routers on =heir own. "

I think I mentioned that =y father ended his government career as the Director of Procurement =olicy at OMB, and he agrees with me that when it comes to IT Budgets =obs are best managed by pre approved budget amounts i.e. \$10,000 =20,000 And then the job is tracked in progress within these =greed budgets giving the Project Leader (Me) the ability to spend on =he fly as unforeseen tech issues almost always have issues that need to =e resolved in a time frame faster than accounting can move. Also I did =ork at HBRK yesterday and the notes Let By Bill have come into focus =ow that I have been into multiple locations. As far as LSJ is concerned =t is clear to me so of the plan needs the altered, and some needs to =ave to be implemented. I will be working with Jermaine on Mon to see if =e can make things better for you before my =eturn.

Sues computer should be =hipped to HBRK for repair but my guess is we just buy her a new one and =ee if I can save the hard drive as is has know backup. All allocation =ack up services with be provided for staff so when I ask "are you =acked up " and the answer is almost always no I will on the fly solve =hat at any location.

any questions BOSS ? I =ove working for you guys so much every is just awesome and I can't wait =o get started again mon morning.

2011 is going to be a =reat year and I am moving forward fast just need some buying =ower 4 g hot stop and firewire boot we need to work with you =oon.
all the best scott
