Deepak Chopra UCSD School of Medicine <=span>

The possibility of a Theory of Everything was doomed as a physicalist project but can be revived--and even accomplished--by reconceiving the problem in a radical way. As the starting point, physics needs to consider not the objects of knowledge but what it means to know anything. Without an understanding of consciousness--the unspoken constant in all observation, experimentation, and experience--current science cannot bridge the mind-body schism that is the central obstacle in any TOE. In this session, I will address the following questions: Can anything, from a subatomic particle to the visible universe, be taken as a given? How much is knowledge dependent on human consciousness? Is it possible to unify all experience as an activity in consciousness? What would a consciousness-based reality be like? Specially, how can we adopt a worldview where anything that can be described, thought about, or experienced is a human construct? Is the old assumption about a physical world "out there" now totally outmoded and therefore a dead end for investigating the "real" reality? Key Words: Theory of Everything; Knowledge; Observation, Experimentation; Experience; Mind-body Schism; Consciousness; Reality Submission Date: Friday 3rd of February 2017 01:04:13 PM Last Update Date: Friday 3rd of February 2017 01:04:13 PM Admin Update: Friday 24th of February 2017 01:52:30 PM by Behar-Montefiore, Abi
