**Subject:** Mathematica and SystemModeler

Are you doing any modeling and simulation work this year?

If so, you should definitely consider adopting Mathematica and Wolfram SystemModeler for your current and future courses.

Mathematica is the fastest growing technical platform for college students today, whether you are taking on calculus, physics, finance, or engineering.

SystemModeler is our new modeling and simulation software that builds high-fidelity models in an easy drag-and-drop environment.

And SystemModeler integrates seamlessly with Mathematica's extensive visualization capabilities and thousands of built-in functions across areas such as control systems, linear algebra, and wavelet analysis.

Whether you're beginning your college career or about to graduate into the workforce, Mathematica and SystemModeler can help you achieve your goals. For a limited time, get both Mathematica and SystemModeler for only \$195. Purchase by September 15, 2012, to take advantage of this offer:
