Subject: IDEA For Dry area

Dear Jeffrey,

Dry area for hills and cliffs should be =andscape as the following pictures no water will be needed at a time. =he endemic flora of the Caribbean got all species we need to follow =his landscape reflexion. The clever mix of green textures and the good =ssociation of the right species at the right place will also reduce =aintenance.... less is more :) I also thing that every building =uild on open area should be surrounded by endemic a maximum of endemic =lora although ornamental plant could be added, the sgqueleton of the =arden will be in touch with the rest of the island.

kevin.
