From my friend at the autistic university. Realize that =utism isn't a proxy for genius but it's close right?

Hey Joi,

I haven't heard about gender =ifferences in recessive gene expression before, but I will ask around. =ome of the autism experts around here might know about that.

As for gender/racial =iversity, we have a small number of black students (about 15 in a =opulation of 500), and even less asian and hispanic students. As =expected majority of students are male. Students here on the autism =pectrum are also mostly male (70% or so). The ADHD and dyslexic =opulation is closer to parity (maybe 55% male).

In other news, I am doing a little =nformal discussion with folks around here to seek out a alumnus who =ight be a potential Director's Fellow. I have a few possible people on =y list, and I will send you some of their info in a few =eeks.

Thanks =gain for hanging out, and hope to hang out again soon,

Cyrus

PS: Got my bottle of =OBiome yesterday. I will let you know how it goes.

My understanding is that autism hits men more =because they express recessive genes more. Is this true?
What's =our racial and gender diversity look like at Landmark?
