Subject: Re:

Very interesting and strange!
I noticed there was a Kleenex box sitting on top of your VIP light switch=,.
I wonder if the weight of the box pushing down on severa= of switches at same time has any effect.,

Long sh=t of course,

I'll research wiring print further </=iv>

Thx
Larry

Jeffrey
I'd have to confirm with wiring schematic, </=iv>
#1 and #2 Emergency Battery Buss powers emergency exit lights, &nbs=;

Table lights use aircraft Main DC Buss for power=nbsp;

As far as cabin temp controller digits errat=c:
Was it a digit that appeared to blink and give wrong temp read=ng or completely different number?
Note:

The left hand =WD window shade by aft facing seat, sometimes gets stuck in full up positio=, and does not close,.

As soon as you turn all power off th= aircraft and reboot the electrical system, the shade works normal,.
I can'= get an explanation of why this occurs., this could be same situation with t=e temp controller digit.

Thx

Sorry missed your call,.

Exi= signs have G sensors and power interruption circuit,. That are normally po=ered by aircraft DC voltage,. And have 2 D cell batteries in case of t=tal electrical failure in emergency

A power i=terruption would cause exit sign to illuminate
