**Subject:** 2015.5 Escalade Lights

i spoke with Scott and he proposed using small lights on passenger and or driver side between second door and back window right below roof cross bar. scott thought using 2 to 3 lights on each side and having toggle switches inside car to turn on and off and control each side separately

as we discussed car we agreed that bar on top of car would not work due to garage parking clearance that ranges from 6 feet 6 inches to 7' (we can look to change garages if you do not like options below)

lights are in yellow as scott is fearful that you will be bothered by police with red or blue

Option 1:

<http://www.awdirect.com/whelen-competitor-led-light-vtc3a/hidea=ay-lights/>

Option 2:

<http://www.awdirect.com/whelen-surface-mount-rota-beam-amber-warning-light-6rba/surface-mount-lights/?hcs=wb6rba>

Picture of car

<http://gmauthority.com/blog/2014/07/cadillac-escalade-to-gain-8-speed-trans-360-degree-camera/>

Please advise if you like either of these options and if so how many lights on passenger and or driver side Thank=you
