Subject: B727 APU troubles still

Jef=rey,

The Boeing APU was working Great when we arrived in Palm Beach, it started every time,.
=div>My only problem after we landed in PBI, APU generator n=t coming on line, after the first two days of trouble
sho=ting, now the APU will not completely start, The APU flames=20out during the start, which was original problem in
Georgia= I have tried 4 APU speed switches, most of the speed s=itches were old and possessed overhaul tags over 8
years ag=, (speed switch is the hart of the APU start sequence= it opens fuel valve, disengages starter etc. I located=20a
New stock speed switch, and it failed to start the =PU,. Larry Morrison, Big Sky Aviation in Palm Beach, =tambaugh are
all involved in trouble shooting. Today we di=covered the Fuel start value was not staying open, this is =ontrolled by
Speed Switch mainly, this is promising. , =0A this issue reminds me of the Cesnna 421 Prop RPM=20issue, that
exhausted us.

=div>All involved are working very hard to resolve this issue<=div>

thank you
Larry
