Subject: Visual pool

Hi Jeffrey,

Please find attached a visual of the idea of the natural pool we've been working on together on the beach. I did this visual real quick for you to visualize. I know there still the security issue, but I think my stick wood fence will solve that problem as the pool will be then protected and the ocean view kept. But it is absolutely necessary to rise up the pool 45 to 50 cm off the ground as the fence will be 1 m but localized 0cm lower on the beach following its slope and at 50' from the ocean of course. I haven't decided materials yet and there still is a building to design (Philippe) next to it, this visual is pretty conceptual at the moment. However, to go further, you will find attached a picture of a villa I worked in St Barth where I think the balance between pool, building, and garden is very good ! Please tell me what you think about it. Also, I wonder whether you had time to go over the est of my project? do you like the amphitheater idea's, the pool office? arboretum? indeed the location of the pool office is a very nice spot I found and I would like to open it up to show you it's ambiance as the areas is very protected from the wind and there is a nice view.

Hopping you are well,
best regards,

Kevin.
