**Subject:** Vibration

Jeffrey

I just did ground runs on air valve install., I have a test for you to judge when we start engines tomorrow. I can duplicate on the ground the vibration we are experiencing in flight I think., If I run the engines at 40% HP rotor RPM you can feel an exact duplicate of the vibration we feel in Flight, as soon as I bring the engines to idle it is absolutely smooth, just like decent., Since we are three years away from Engine overhaul, I think this is an engine internal problem both engines are creating our vibration in my opinion. Billy is flying another G4 today and he will accomplish the same test and report back to me later tonight, since he is aware of the vibration.
