Subject: ANA test

This seems to conclude that having a positive SSB number but not SSA does not provide support to diagnose Sjogren's. Usually you need SSA or both. But I found no other diagnosis for having only positive SSB.

The SSB-positive/SSA-negative antibody profile is not associated with key phenotypic features of Sjögren's syndrome. - PubMed - NCBI <<https://www.ncbi.nlm.nih.gov/pubmed/25735642>>
