That quanta are mental and therefore travel outside of spacetime faster than light

While still a monism, Leibniz's universe is dual aspect, more complex than Einstein's, which only features a spacetime aspect. Leibniz's universe also features a mental aspect or perspective. Quanta, which are mental particles, can therefore travel faster than light, ie at infinite speed, enabling the Einstein-Podolsky-Rosen phenomenon of "entanglement." Bohm's Implicate-Explicate universe is seemingly dual aspect, but is not a true monism like Leibniz's universe, since the mental and physical are simply Cartesian, two=parts of a whole, not truly dual aspect.
