Subject:

Ruminating (in Beijing traffic) on plant =iology and ways to structure possible Closer To Truth (CTT) series to =ortray your sense and insights.

For plant biology per se, there's=probably three strong episodes, with higher production values needed to =llustrate ideas/principles (more than the usual CTT talking heads). To =it the CTT framework (and audience expectation), these fascinating =discoveries or hints of complex, multifarious mechanisms would need to =e explored (even if not yet understood) in terms of simple, fundamental =principles (applicable across disciplines - so-called 'general =ystems theory').

This potential series on plant biology could be extended to =-6 episodes by including medicinals - plant derivatives that are, for =ome conditions, best treatments for numerous diseases. This could =nclude, for example, a critical look at Chinese medicine.

I think, though, there =s a bigger idea lurking here. Your unique ways of thinking, exemplified =y plant biology, encourages another, larger possibility for a =significant CTT series. Each of the topics you've brought up, =nd many of your past fundings, sought kinds of breakthroughs or =radically new ways of approaching reality and the knowledge and =anipulation of reality. So, how about producing a big CTT series on =ust that - "Radical Breakthroughs"?

I can imagine CTT episodes on each of =he following kinds of topics you've mentioned, in which radical =reakthroughs or deep structural significance are being =ppreciated:

- Plant =iology
- =ception (biology)

=/span>- Power Laws ("found everywhere in nature, Pareto, law of large =umbers")

- New =ath ("category theory, membrane computing, as a new tool for =ognition")

=/span>- Mathematics and Truth

=/span>

- Music ("a tool to interrogate =he brain, not a product of but a lense into the inner =oftware")

=/span>- Dreams ("always on, consciousness blocking access, schizo have =leep disorders")

- Power (nature, as you said, =financial, physical, intellectual, ability to do things in a local =pace")

I'm sure there are other such categories of =E2◆◆radical breakthrough' - for example, several wild ideas =n neuroscience, such as levels of information from sub-cellular to =assive circuitry.

We would clearly unify the topics and episodes with an =verarching thematic vision of "radical breakthroughs" =hat "challenge conventional wisdom" (this phrase was an =early Closer To Truth subtitle).

Several of these topics can have more =han one episode. We can easily produce 13 high-quality episodes and =hus have a coherent full season on "Radical Breakthroughs", =hich would be distributed and marketed as such.

Such an approach to “Radical Breakthroughs” is core CTT - in fact, I attempted this as part of the very first CTT series in 1999/2000

“How do Breakthroughs Change Science” - with evolutionary biologist Francisco Ayala; philosopher and neuroscientist Patricia Smith Churchland; author/astronomer Timothy Ferris; child psychologist Rochelle Gelman; and astrophysicist Neil deGrasse Tyson - <https://www.closertotruth.com/roundtables/how-do-breakthroughs-change-science>

“What are the Big Questions of Science?” - with evolutionary biologist Francisco Ayala; philosopher and neuroscientist Patricia Smith Churchland; author/astronomer Timothy Ferris; theoretical physicist Steve Koonin; and astrophysicist Neil deGrasse Tyson - <https://www.closertotruth.com/roundtables/what-are-the-big-questions-of-science>

Though the production values of these early shows are much lower than our current version (since 2008), the content and contributors suggest how CTT can do a big new series - a full season of 3 episodes - on “Radical Breakthroughs”.

Appreciate specific direction, so that when we meet, I can be prepared

Love to do something big and dramatic together.

plant biology. ? great experiments being done. rarely looked at before. root communication. No, I have not lost my mind, = If done well, you would get lots of press. cutting edge technologies for optogenetics, experiments that dont require IRB approval. . its very exciting. do plants get an alzheimer equivalent plaque, . als disease. parkinsons , yes it seems so. most cancer drugs are plant derivatives. = lots of fun . good luck in china

Appreciate consideration. I'm next in NY June 7 (for about a week); love to rainstorm.... I too would really like to do something (important) together.

Just arrived in Beijing for the “The Belt and Road Forum for International Cooperation” (commentating), the second most important event of 2017 in China (after the upcoming Party Congress), but Western media not paying much attention, what with All-Things-Trump.
