The Science of Consciousness

June 5-10, 2017,

'The Science of Consciousness' ('TSC') is an&nb=p;interdisciplinary conference on all aspects of the nature of consciousness experience, awareness, feelings and existence. How does the brain produce consciousness? Is consciousness intrinsic to the universe, or an epiphenomenal illusion? How can consciousness causally affect brain processes? What are the best empirical theories? Do we have free will? How did life and consciousness originate and evolve? What are the origins of moral and aesthetic values? How can we improve mental, physical and cognitive functions? Can consciousness persist after bodily death, e.g. through 'uploading' to machines, or via mental processes tied to the natural world?

Informal, intensive and interdisciplinary in a fun environment, the 24th annual TSC conference will consist of Plenary Sessions, Pre-Plenary Workshops, Evening Concurrent Talk and Poster sessions, Technology and Art Exhibits, Social Events and Entertainment. &nb=p;

For registration, hotel and other information&n=sp;see:
