Subject: RE: Savant syndrome and nonlocal mind

Paul,

Good to hear from you and your interest in telepathy in autistic children. In my recent review of our savant registry, now over 300+ cases, about 1% of parents or other reporters indicated ESP/telepathy abilities in that sample. When Rimland did his review of 3500 detailed parent reports he also noted about 1% had paranormal abilities. Even in my most recent acquired savant sample (59 cases) one such case reported paranormal abilities newly present. And I have been working with a girl with severe autism impairment since 2013 who shows clear (to me) telepathy connection with her ABA therapist. Diane knows about that case. And I am familiar with two other such cases in other countries. I am busy the next two days with a filming for NHK japan television with GOMA, Hiroki Morimoto, a rock star Didgeridoo player in Japan <http://gomaweb.com> <<http://gomaweb.com>> who has now acquired savant art abilities. He will be visiting the Treffert Center with the Japanese film crew tomorrow and Friday. Let me review the clip you sent and get back to you sometime next week.

I enjoyed participating in the Salk Conference electronically at least, but it is not a good as being there. Had I been there on Saturday is was my intent to discuss my involvement with paranormal skills in autistic persons with discussion of my nearby case with that closed group. The tapes I have over these past four years are convincing indeed.

Darold A. Treffert, M.D.

Dear Dr. Treffert,

A few weeks ago I attended the Salk Institute's conference on "Extraordinary Variations of the Human Mind", and listened to your streamed-in presentation on the savant syndrome. Thank you for your ground-breaking work.

I've been working with Diane Powell, MD and Deepak Chopra, MD on a project that is part of a long-standing clinical and research program of Dr. Powell's, studying telepathy in autistic children.

Earlier this year we conducted a pilot study of a young boy and his mother and aim to continue this work under improved experimental conditions, pending grant funding. The link below is to a 5min video of some of the testing and we would value your opinion and any advice on moving the project forward.
