Good night boss

The last speed test was 15 MB down and 5 mb up. I will install a monitoring device so I can monitor the speed remotely until VIYA restart their services. = The flag pole pool audio system is online . There is 3 cables in really bad shape so I left them unplugged, but the speakers were tested and they work. = I am programming one of the new switches that was sent. To replace the damaged wood shop switch (this switch feeds the flag pole pool without it there will not be any internet service to that at the flagpole.), since VIYA can't assist us at this time. But, I will provide a copy of my code to Hector of VIYA so that they can modify it once they return to managing the network.

I also found 2 broken fiber stands on the wood shop/ flagpole pool fiber cabinet. =
