If I didn't call it out specifically, the universal remotes won't work with the new Apple TV. The new remote will only send power on/off, input source selection & volume control, and none of those signals appear to work on the setup on the 4th floor. ( <https://support.apple.com/en-us/HT205225> )

It's a two remote scenario, at least until there's a universal remote that's designed to work with the new Apple TV.
