=div style="-webkit-text-size-adjust: auto;">Good Day All, I am in the final stage of the wifi project= Let me start with what's completed : Cabanas, Gym, and blue beach. &=bsp;I will be installing the master bedroom, mst. bath, kitchen, white tabl=, library, and kite house. These units are all programmed and it's ju=t a matter of taking out the apple extreme and replacing them. Flag p=le pool has a small problem as we have a apple express used there for airpl=y. I recommend getting a airplay preamp that will work seamlessly wit= any network we install "future proof" see bottom of email it's my recommen=ed unit.

Now the h=rd stuff, Danny will be cutting the whole in five palms today and I will be=installing those units as well which I also have programmed already. = am having trouble with the tower height. I will also be on St Thomas=trying to tweak the signal some more. We are not getting the full ban=width presently. I'm at 56 Rssi and I need to get it down to a 36 Rss=.

It's very challe=ging working around Mr. J E schedule, so I don't see finishing today at all= Installation of all equipment will be completed, but I will need som= time to tweak and do a walk through.

At the end of today I will update everyone again.
