Subject: Online Cryptography class: week 4

Dear jeffrey epstein,

The week 4 lectures and problem set are now posted on the course web site at

<https://crypto.stanford.edu/OnlineCrypto>

The problem set is due in three weeks.

This week's topic is authenticated encryption: encryption methods that ensure both confidentiality and integrity. We will also discuss a few odds and ends such as how to search on encrypted data. This is our last week studying symmetric encryption. Next week we start with key management and public-key cryptography.

As usual there is also an extra credit programming project. This week's project involves a bit of networking to experiment with a chosen ciphertext attack on a toy web site.

Enjoy,

Dan
