Subject: =/b>Sound =system

Date: =/b>July 9, 2015 at 12:24:29 PM =DT

Hello Rich, So the Sound system in the Truck can be =ialed in and tuned. There is a break in period for that . We usually =expect 2 weeks for the customer to come back for a final tune. This will =increase the Volume and bass quite a bit. Whatever we have to do to make =im happy with the sound should not be an issue at all. We do need some =nput on what he thinks is lacking.. EXAMPLE. More low end, More =idrange ETC. Also not sure which radio he is using. There is a black =button to switch between front radio/rear radio. Also you can adjust the =system by the black knob it has two ways.. I think it's =ore that he does not know how to use the new sound system or adjust =hings to his ear. It would be best for us to gather more info and or =how him in person .

We took the approach of a stealth system =eeping everything like factory. This actually takes more work to =achieve. Because of lack space it's more of a challenge. Below =s a list of the items installed

1. =/span>Front speakers are Alpine Spr-60C
2. =/span>Rear speakers Are Alpine Spr-60C
3. =/span>Amps For front rear Pdx-F6

4. =/span>Amp For Sub Pdx-M6
5. =/span>Audio Control LC8I Processor
6. =/span>Alpine CDE-149BT radio rear
7. =/span>Jlaudio 10w-T3 slim subwoofer tucked away on =eft corner behind factory panel
8. =/span>RCA plugs By stinger
9. =/span>Stinger Power cable/Fuses/wire
10. =/span>20 plus hours of labor to make custom radio =anel/wire/install speakers/x-overs/sound Tune
11. 5 sheets of acoustic =ound damping by STP
12. Audio Switcher
13. =/span>custom made sub enclosure to be stealth =abricated in House

We will do what it take to tune and adjust to =is Ear and or replace equipment if needed..
