Subject: GII update

Jeffrey

I just visited the GII maintenance progress,. No major problems, but many areas of corrosion in flight control, flap track, winglet attach point=20 bolts and flight control bearings, normal stuff, on aircraft with= 10,804 hours,.. Gulfstream estimates a completion date March 2nd, Friday, I=20 believe this is a good date, with a slight possibility of earlier, want to =ive you a real date for your planning purpose,.The schedule you provide me indicates you will depart palm beach on March 5th, I think we could plan on GII being=able to fly that trip,.

thank you,
Larry
