Good Morning Boss,

To answer your question, as to whether there are "Canary Island Date Palms" in Puerto Rico?

Yes! You actually have 7 tagged and ready to transport, from my last trip to the farm.

As I told you before, the Date palms at the Gramas Del Sur Farm in Ponce, Puerto Rico are Pheonix Carnariensis, Exactly like the one planted on the western side of the island, in the bed of bouganvilla.

The "canary island palms" are very closely related to the Pheonix Dactylifera, which are the huge trees planted in the courtyard, and the smaller ones by the 3 way fork in the road. It is actually hard To tell them apart, unless they are planted side by side.

There are two main (commonly used) Date Palms;

1. Pheonix Canariensis-

Native to the Canary Islands and Commonly known as "canary island Date palms"

2. Pheonix Dactylifera-

This is the "True Date Palm" so called because it is cultivated for its sweet fruit.

If you have any further questions, Let me know.

Have a Good Day,  
Igala
