Thank you for your email, Al -

What splendid ideas!

I know Jeffrey's impact well firsthand -  
he has generously contributed to projects my colleagues and I have pursued and are pursuing at  
the interface - some might say, the unfortunate schism - between neuroscience and the arts.  
Unfortunate, given the latter's ethological relevance to human behavior. In other words, any  
neuroethology of human behavior must include the study of brain mechanisms mediating the  
cognitive neuroscience of music, the visual arts, etc.

Jeffrey grasped this intuitively, and quickly - as well as other, more quantitative aspects of our  
work on neural coding of acoustic information in music - and provided anonymous support.  
Am en route to the sites! Please don't hesitate to call or write if I can help in any way.

With warm regards to Jeffrey,  
Mark

Also, by the way, my brother-in-law is Roger Malina, who edits the journal Leonardo, which is about the intersection between the arts and the sciences.
