**Subject:** Some results

Jeff,

I am very happy to report to you today that we have managed to get some very positive results already. This was not the case as of yesterday, when we checked. So, the bots may have just made their rounds taking our work into effect.

If you typed your name in "google News" the first article that came to the very top was the most recent suit (from last month), and as you scrolled down, there were other articles. If you typed in your name + pedophile, etc. you would get scores of results of news, blog, and other entries.

Now, if you type in your name, you will see endless pages of google news about every other Jeffrey Epstein, but you will not find any more news articles about you. Even if you type in your name + pedophile (a direct search), no documents will turn up.

We did this by effectively creating massive amounts of links, search engine parameters to all the other Epstein's, etc.

Of course, if NEW articles appear, we will have to deal with them on a case-by-case basis, and we have a google alert on all terms, so that we can catch things when they appear.

This, of course, also will effect the main google search, as these articles will now start coming down in relevance...

We are now embarked on a very offensive similar strategy for the main web, which requires the posting of new websites, etc....

Anyway, we are very pleased about this....as the news articles and blogs were particularly pernicious, and so that is where we started.

However, if you went into google news archive, you would still find the articles, but unless you are intent to do this, it is unlikely that one would do this...

Yours,  
Al
