Subject: GIB maintenance

Jeffrey,

I used the toaster for several minutes no faults noticed, all was operating correctly.

I have the Gulfstream being worked on at Meridian at Teterboro, the APU flamed out two times recently for no apparent reason, I heard a hissing sound from the exhaust before the APU flamed out, I suspect the fuel nozzle being plugged and not spraying a good pattern, which is necessary for jet fuel to burn under the high pressure. plus small interior cosmetic items and avionic items I would like repaired,

Let me know if the schedule changes and when you think you will be ready to fly the Gulfstream, I told them to have plane ready by Friday afternoon at the latest. I will keep you updated.

thank you,

Larry
