Subject: Boeing test flight

Jeffrey,
I had to postpone my Boeing test flight,
during preflight, the #3 brake de-boost valve is leaking internally, There is an indicator that protrudes from the
valve, which indicates internal bypass, new part will arrive 10am tomorrow. \$1,300 for new valve.,
de Boost valve reduces pressure from 3000 psi to 1250 psi for brake application.
I will plan on test flight after lunch tomorrow (Wednesday).
I will keep you updated
thanks,
Larry
