Dear Jeffrey,

We have fabricated a headrest that we believe looks very nice. We suggest two (2) as the middle one looks a bit awkward in our opinion.

The first two (2) photo's attached show the headrest we came up with.

The second two (2) photo's show the same headrest elevated higher by .75" if in your opinion you want the headrest to be taller.

If you do want the headrest to be taller, then we will "fill in" this .75" gap with foam.

Either way, the foam headrest will "sit" tightly against the top of the back cushion with out any gap.

Please comment so that we can move forward.

Larry, the cockpit maintenance runner is the closet color to match the leather as offered by the vinyl manufacturer. I think that the color is a very good choice and that it should be left as is.

Please call me when you have a moment.

Sincerely,
