Subject: ATT Wireless reception in the Dining Room

Good Morning Sir,

There are three options for resolving the poor wireless reception issue in the Dining room:

1. Blanket the house with repeated signal and upgrade 80db amplifier: \$13085.00
2. Deliver service directly to the first floor removing the antennas from the floors between. This uses a 10db amplifier for the first floor only: \$2235
3. Zboost solution with new penetration into the dining room and cable run outside the house wire tied to exterior: \$1860

Just wanted to follow up and see if there was one that you preferred.

Thanks,

William Murphy
