Title: Re: It's with David Gelernter. Remember how my current research has been on facilitating reproducibility in computational science? One of the main barriers is the tools: most interactions with computers are a dialog designed to produce answers, with no regard for the future sharing of processes and workflow (ie. Being reproducible). So we're designing a collaborative virtual system to build reproducibility into computational scientific research. There's a perfect grant we're going to apply for: http://www.nsf.gov/crssprgm/cdi/ The kind of system we're imagining is becoming more important as more and more research moves into the cloud. Very exciting. Love to tell you all about it. How are you doing?
