let me give you a hint, speaking of smart people
1. there are none at the univ of tennessee
2. pattern recognition is studied by math nuts who dont get it about the mind
3. israel produces nice airplanes (I assume)

I 'll bet he talks faster than pamay; but in a head to head he would lose

Jefferey,

As promised, attached is a short video illustrating the classification
capabilities of my system on cats and dogs images. The system achieves
human-level classification rates where, obviously, the images shown
are ones that were not presented during the training phase. The engine
behind it all is the hierarchical architecture I mentioned when we
met.

Although this is a small-scale demo, it emphasizes the core
competencies of the approach: robust information representation of
complex patterns, based on examples alone.

- Itamar
