By separating them and using varied elevations the end result will look like this:

I believe that the rendering trees are out of scale; I will review and get back to you.

Drawings sent yesterday have a graphic scale on the bottom left corner. We will show human scales in the rendering for clarity.

so the four ladies need to be in one building. clearly the secondary= it looks like a cheap development. and i believe the scale is wrong on the rendering. , your computer models are very misleading. and please again put a foot . scale on every drawing.

Good morning Jeffrey, please review these locations for the master retreat and the ladies' residence as per the drawing sent earlier= Master is approx where existing house is and ladies gathering point is a little above the existing trash area. In this proposal they can have Beach access if wanted.

Don't pay attention to the finishes of the buildings. This is just the raw model for us to see approximate location, elevation, etc.
