Subject: Existing vs proposed...

I don't think there is a scale=or topo problem... perhaps the ladies residences could be a couple feet les= high but it's close to what it will be.

=div>Look at the elevation of the existing houses; they are around the 35♦=80♦ elevation marker.

Of course the raw model lo=ks like a cheap development because there are no finishes or vegetation but=right now all we need to define is size, location and elevation and verify v=ews, winds, sun...
