**Subject:** Re:

you dont have to be a scientist to understand the concept of proof. Does massage work? not a science question, but some think it does. can you prove to anyone that your intuitive abilities are repeatable. verifiable, . probably not. but is ok. with vast experience, chinese doctors can tell if someones kidneys are working properly, the eyes are a little dull and yellow, ♦=A0 its not science but a pretty good predictor. . the other experiment you can try if you want is hold their hands. write down what you feel. , and afterwards have them choose which best describes their characteristics. I did this with 200 girls. each one had to rate the accuracy of diagnosis on a scale of 1-10. the results ranged from 3-10. however, the written diagnosis was exactly the same for each, no one like the results. believing is more fun

I don't mind anything you're saying - I am definitely not a scientist, don't claim to be, and don't know much about experiments and design.

I feel like it'd be good to talk it out? I say what I can do, and somebody who knows science tells me how we can test that, until we arrive at a solution that works both ways?

I like you, ♦=C2♦ I am trying to be kind, that is not science. . if you make people feel better and no one is injured, all the best to you. ♦=A0 how about being blindfolded and guessing their name. the outcome must be verifiable, not you are say, sometimes. angry other times . the trick of mentalists that do much better than that. they could take a strength finder test, and then you could take it with empathy for them, ♦=A0 there are 100 questions see if you got more than 80 percent right.

Jeffrey,

Just an additional thought. A vision, actually--

What if I did readings blin=folded? So I held someone's hand and felt into them. With such limited=visual/tactile information, it would be a real test of my empathic abiliti=s. It would almost validate "the sixth sense."

Then maybe we could compare my ability to read people with an avera=e person's ability to read people?

Just=brainstorming here...

Very best,  
David<=div>

I would love to do that. Definitely has higher probability of success.♦=A0

Hi Jeffrey and Gino,

E=rlier today, I sat down with 15 pictures and 15 names and tried to match t=em. It turned out to be quite a struggle -- primarily because people were =ery similar. For instance, I'd have descriptions like this:

=br>

Shy but relatively happy on the outside

Filled wit= frustration and anxiety

Burning with rage deep down

<=r>

But out of the 15 people, that could vaguely describe 3 or 4 =hem. So my matching ending up looking like a convoluted chart.

=div>

What I concluded was that I need a bit more help design=ng this experiment. Ideally, rather than matching 15 names to pictures, I =ave a bunch of binary decisions (A or B). One would expect me to get 50% r=ght. IF the people are emotionally different enough (happy v. sad, for ins=ance) I hypothesize I will do considerably better than chance. Does that m=ke sense?

I have started to go down this road with my friend at NYU. Happy to discuss with Gino as well.

And of course, happy to submit to MRI machines and the like to figure what's happening on that end.

Open to any and all thoughts. Science, clearly, is not my gift.

=div>Very best,  
David

Hi Jeffrey,

Sorry it took a beat to respond.

This weekend, when I have space and time, I'll ask a friend to lay out some pictures and names and see how I do. And I'll report back what I learn.

I've been thinking about this for a while -- and I do feel we ultimately need a more vigorous experiment. But I like your idea, at least to start, of just giving it a good and seeing.

Great meeting you.

david, if you can do the name to photo test. in a 25 picture test. ♦=A0 it could be an interesting beginning, , I suggest you take twenty women all available on google or facebook and they. ,
