Subject: Update and retrieval

Latest update:

Frozenwaks now says he looked at the ultrasound with the Arab dr (dr ironi)=who did it on the 1st day and they both saw 8-10 follicles on each side (s= total of 16-20) and with my good amh we should be able to do better in fut=re rounds with a higher dose from the start. I feel like what they clarifie= today should have been clarified in the first couple of days.

(I want to do a future round but whether it would be with them remains to b= seen, probably unlikely)

There are a few in there that could be viable so I think I will retrieve th= few I can tomorrow morning. The process is 10 mins in twilight sleep. I fe=I like after taking all the meds and just having one more step and day I ma= as well get the couple I can. And then add them to a future hopefullybett=r round.

Dr Arab says that there are fewer risks associated with retrieval than the s=imulation injections and they don't put a limit on how many retrievals a wo=an can do. He says they have some 44 year olds who have even done 10. He sa=s that the reason not to do it would be if I wanted a couple thousand reim=ursed to us.

I will be awake from around 5am

I love you xxx
