Subject: Re:

Happy to oblige. Your wish is my command.

As I mentioned, we have = theoretical foundation which may help in the experimental design. =nbsp;

Ideally =he 25 photos and names should come from one source with a person who =as a relationship with the people. David's understanding =f the people when he reads them would be tracing the relationship =between the asking person and the person asked. I would think that =he link was emotionally based (otherwise why are they asking something) =hich, by my framework, is a binding between a symbol and physiological =rocesses from some experience in space and time). The stronger the =symbolic meaning (emotional attachment), the greater the connection. =nbsp;The pictures should be within a period (recent) perhaps? The =result would also give insight into how language works (also binding of =symbol to somatic). Any other thoughts?

As he's read one of your girls =Karyna?), perhaps we could task her to get 25 pictures of her friends =nd people that she knows.

What do you think? Maybe we can have Paul try as =ell?

Whatever =he costs to set up, you can take it out of the 100K (just leave 60K for =he conference events that I'd like to run). I'm =lso happy to fly out to NYC to witness the experiment.

gino

PS. Incidentally, = forgot to tell you that I am hosting TSC next year in Shanghai (<http://www.consciousness.arizona.edu>) and worked with a =ainland group to acquire the conference. Would like to bring =uart Hameroff to see you (if you haven't seen him before) = <http://www.quantumconsciousness.org>. With him, I =an get Sir Roger Penrose as well if you want to go all in on =uantum.

PPS. =nbsp;With another budget allocation, I am happy to work with you on =nteresting questions and bringing the best people together to discuss =hem (the budget would cover travel and accommodations). Happy to =erve as your science pimp. After spending the day with you, I =alue your approach and insights as much as your funding. <http://www.npr.org/sections/thesalt/2016/08/06/488861223/cockro=ch-milk-yes-you-read-that-right>. I feel that a lot of great =hings could come from our collaboration.

why dont we just put david to his own =laim. 25 photos. 25 =ames. randomize and see how he does. = without that first test I have no further interest.

It would also be interesting to see what would happen if we had David reading Paul reading David.

What they do appears to be physiological and consistent with the embodied knowing vs. conceptual knowing (thought can presence) and not being able to do both at the same time (eye contact). Jay Gunkelman also has a theory.

Lots of interesting experiments possible when you have many readers and an underlying theoretical basis.

david, if you can do the name to photo test. in a 25 picture test. it could be an interesting beginning, , I suggest you take twenty names all available on google or facebook and try. ,
