Subject: Re: Harry Cliff: Have we reached the end of physics? | TED Talk | TED.com

I have always advised my patients to believe the diagnosis but not the=prognosis because I don't know where they stand on the bell shape curve&nb=p; Invariably they beat the odds - also because=they expect too and meditation which gives them insight on what to get rid=of in their lives !

not at all. the "probablity" of you emailing me =t the moment would have been calculated to be infinsitmesmal o=ly one year ago. probability is only va=id when events are independent and happen more than once. ,&nb=p; more than once. otherwise. the mathematics are meanilngless. it has gotten into the=popular vernacular.

the future is : unknown within bounds. . if i say you can=turn left or right. when you do the future becomes=the past , ie two universes that exist in the futu=e collapse into one .

from this monrning earlier email . I might suggest that if you =urn right , , someone else turns left. the distribution of rig=t and left doesnt change. very spooky

Agree to all you say

That's why doctors should never prognosticate outcome of disease based=on statistics for an individual

However fine tuning of the universe is a problem unless you posit infinite universes

every few years a scientist comes out and says we know all we can know about X . it is always seen in hindsight as silly . at best

Einstein, and his buddies , thought that biology was too hard to study, and after hundreds of years .and the smartest mathematicians , scientists in the world trying- mother nature has not let scientists look up her skirt.

I want you to think about distributions rather than individuals. = probability distributions rather than a single point on the curve. (a bell curve if you prefer)

knowing that the average height of men is 5 foot 8 . and taking=a large population. when you ask me a question re the height of deepak. I can tell you, he is less than 9 feet tall and larger than two feet tall. = Thats it. no other reality , though hundreds exist in our survey. we can say nothing about deepak

when studying pressure in a cylinder , mathematics and physics allows us to sum over all the molecules. it says NOTHING =about any one molecule. within bounds. of course. ie we know=it is not perfectly still

If you postulate that knowing a person is like trying to study a molecule . maybe the only thing we can say , is that given 100 people. some will be happy , some will be sad. = and which one is unknowable. (like the molecule). &nb;p; and by making one individual happier , to keep the distribution the same nature makes someone else unhappy. . thats the way it works=with money , height, , the number of people killed on the roads each year. constant at around 50k people but says nothing about which one will be killed.
