Everything gets boring ultimately

The energy of pleasure exhausts itself and must be given a rest in pure consciousness

she conceals everything . if taken as only one girl (boring anyway)

Statistics is like a girl in a bikini
What she reveals is obvious
What she conceals - is more interesting

not at all. the "probability" of you emailing me =t the moment would have been calculated to be
infinsitmesmal o=ly one year ago. probablity is only va=id when events are independent and happen more than
once. ,&nb=p; more than once. otherwise. the mathematics are meanilngless. it has gotten into the=popular
vernacular.

the future is : unknown within bounds. . if i say you can=turn left or right. when you do the future
becomes=the past , ie two universes that exist in the futu=e collapse into one .

from this monrning earlier email . I might suggest that if you =urn right , , someone else turns left. the
distribution of rig=t and left doesnt change. very spooky

every few years a scientist comes out and says we know all we ca= know about X . it
is always seen in h=ndsight as silly . at best

Einstein, and his buddies , thought that biology was too hard t= study, and after
hundreds of years .and the smartest mathemat=cians , scientists in the world trying- mother nature h=s not let
scientists look up her skirt.

I want you to think about distributions rather than individuals. = probability
distributions rather than a sin=le point on the curve. (a bell curve if you prefer)

knowing that the average height of men is 5 foot 8 . and taking=a large population.
when you ask me a questi=n re the height of deepak. I can tell you, hes les= than 9 feet tall and larger than two feet
tall. = Thats it. no other reality , though hundreds exist in our survey. we can say noth=ng about deepak

when studing pressure in a cylinder , mathematics and physics&=bsp; allows us to sum
over all the molecules. it says NOTHING =about any one molecule. within bounds. of course. ie we know=it is not
perfectly still

If you postulate that knowing a person is like trying to study a mole=ule . maybe the
only thing we can say , is that given 1=00 people. some will be happy , some will be sad. = and which one is
unknowable. (like the molecule). &nb=p; and by making one individual happier , to keep the distribution the same
natu=e makes someone else unhappy. . thats the way it works=with money , height, , the number of people killed on
the roads eac= year. constant at around 50k people! but says nothing about which one will be killed.
