he pointed me to brian josephson, seems scattered.? view?�=A0 I m trying to convince depak to move in the realm and study of probabilities and =tay away from quantum phenomena. . I think natures distr=butions pushing elements to be average , describes many processes. =C2�. it appears that morphing all local faces into one (av=rage) appears to be beautiful. . if things are distributed on=a bell live or normal curve, just looking at the distribution =ould lead one to think there is a force pushing toward the middle. =C2� maybe gravity is just that, .�=A0 probability of all things being equally distributed. appearing as=a pseudo force . (like centrifugal fo=ce). the central limit theorem might answer many =ysteries. . derivation of the power laws for examp=e. zipf, pareto. . if the distribtuions are the attractors.�=A0 having even a distribution of esoteric traits like happinesss cou=d lead one to belive that if the distribution wants to stay constant= as one point on the curve (the person) if they become happie=, the pseufo force would push someone else towards the average. .�=A0 and yes - a few times depak and i r=ared with laughter.
