Subject: Re:

reputation as power. doesn't need the sun= it does require signaling?

super excited to work on those questions already discussed power with moshe today

conservation of energy may not be a problem here because most likely an open system constant influx of energy (from the sun)

running makes a runner (who eats enough) faster

power games could include accumulation of payoff asymmetry that would be a very new idea

MObjects are amazing

martin, you seemed want to to describe power as potential energy= ie the ability to do work. . however many of=the categories appear to violate the conservation of energy law . =A0 ie the more you use your intellectual power. the greater i= becomes.- the use of political power ,ex a public hanging . increases the perception of =strength. etc. there seems to be a very important= observer effect - ie signaling. (biological entites need signals ? =A0) the accumulation of power. sends a signal to others. =A0 money might be considered a useful signal. =A0 it can be sent as an exchange or accummulated for a status =ump in a narrow search space. the observer perception meanings are complex

topics for our conferences . I will fund . in=luding hiring others to research. seminars. weekends =A0 etc

1 Power . what is it= what are some of its forms. , financial- ph=sical intellectual poliitical. computational - and others. =A0 . chomsky - langauge ehud military. gates. =A0 financial. . etc

Deception . biology vs mathematics. biologi=al entities FEED. therefore predator prey , loo= at the cost benefit of deception , including self deception. = also respect , how it is earned. wasted, =tolen , even borrowed inherited, and then dignity the study of self respect?

3 Money , what is it ? an agreement? =C2 a signal. similar to ATP. stored converted=and used. created, local global

4. music, melody horizontal combined with vertical . ie melody and harmony, the harmony=C2 is extremely involved. i dont understand if computation=can be made so that parallel processors not only work their own voice= but can be overlayed to form a more complex pattern

5 Probability - is it a force like gravity=. we can describe (measure) gravity , we can describe probabilities. neither do we understand =what they are,

6 Derivation of the Power laws and distributions in biological systems. (is intelligence really just a self organized layered probability engine.=C2)

7 and most interesting of all MOBJECTS . =A0 what are they, what role do they play in cognition are they=the wittgenstein like " images " , or are they more. -they are embedded in context. =A0 they have emotional dimensions. my guess is as the brain sits in 3d space any slicing. would render moot. the mere study of the pattern of neuron firings. =A0 how do objects relate to "concepts.". =A0 I think they are transformations. a=set of mobjects can be described as a concept. . the set of concepts as phenomenon. etc

we know our sensory organs each act in a very narrow band. =A0 as joi said how are they circled. bounded =constrained. focus and attention would be a weighting of=one dimension of the Moject or its projection
